

SPC panel

Aluminium Composite

صنع في المملكة العربية السعودية

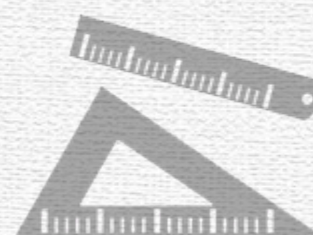

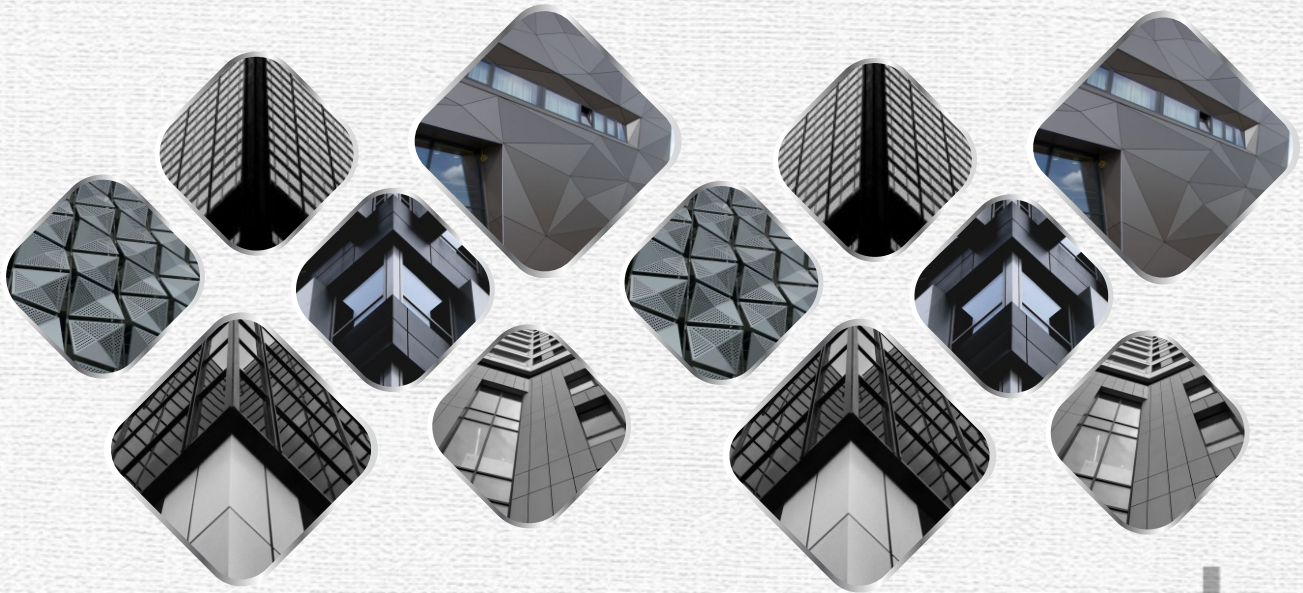

مجالاته واستخدامات الكلاينج :

الحوائط والديكورات الداخلية , المطارات , الأبراج , محطات البترول , المستشفيات , المطاعم ,
ترميم المباني , المدراس , الفلل , المدن الراقية , المكاتب , اللوحات الاعلانية , كرفنات الطرق ,
الكفي شوب , الاسقف ,المطابخ .

Application Field:

Interior walls and decorations, airports, towers, petrol stations, hospitals, restaurants,
Restoration of buildings, schools, villas, upscale cities, offices, billboards, road caravans,
Coffee shop, ceilings, kitchens.

■ Cladding:

Al-Saeed Cladding is composed of aluminum sheet with a fire-resistant core, ensuring enhanced safety and durability.

■ Thickness:

3mm - 4mm - 5mm - 6mm - 7mm

■ Measurements:

In accordance with market-standard dimensions.

: 1.24 X 5.6 m

■ الكلادينج :

يتكون كلادينج السعيد من شرائح الألمنيوم يتوسطها مواد مقاومة للحريق .

■ السماكة :

٣ مم , ٤ مم , ٥ مم , ٦ مم , ٧ مم

■ القياسات :

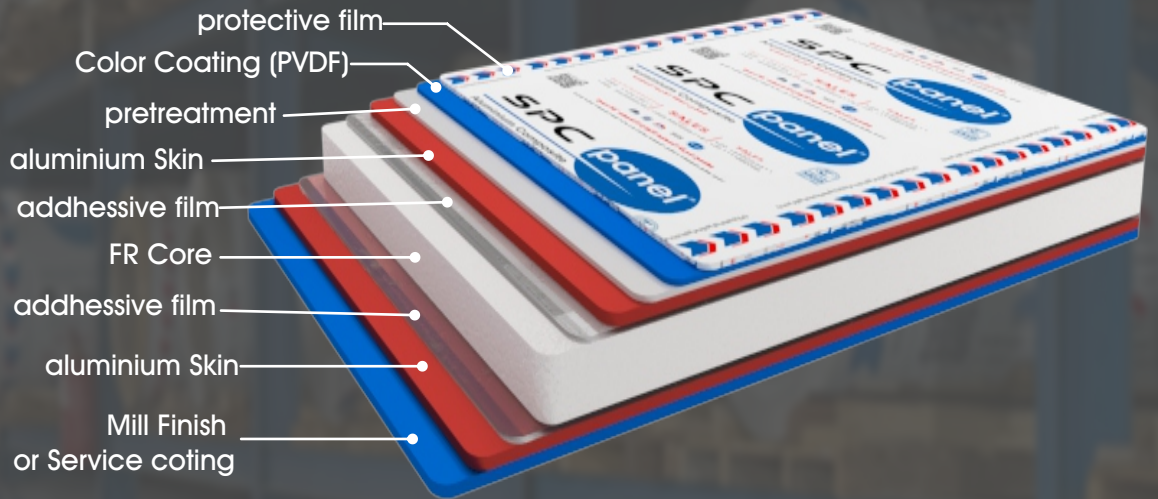

وفق الأبعاد المتداولة بالسوق

١٢٤ X ٥٦٠ م

يمكن تصنيع مقاسات خاصة للكميات أبتدئاً من ٢٠٠ م مع الحفاظ علي استندر العرض ١٢٤ م - ١٥٠ م

↑ Special sizes can be made for quantities starting from 200 m, while maintaining the standard width of 124 m -150m.

PANEL

■ Product Features:

1-Economy: With the use of high-quality coating, aluminum panels require minimal maintenance over time. This leads to cost savings in maintenance for modern high-rise constructions. Due to serious pollution in cities, these panels can be cleaned with natural cleaning agents and water, restoring them to a new appearance.

2-Durability: Polyvinylidene Fluoride (PVDF)-coated aluminum composite panels are highly durable, with excellent resistance to weather, high temperatures, wear, and pollution.

3-Finish: Aluminum panels feature a smooth surface that enhances the aesthetic appeal of modern constructions.

4-Light weight: aluminum are composite of aluminium and plastic which is the lighter than old decorating materials, thereby to facilitate the installation work and shorten the construction period.

5-Easy Installation: Due to the lightweight properties of aluminum panels, they can be precisely cut, drilled, and shaped into custom configurations, such as arches or right angles, to fulfill specific decorative and design requirements.

6-Non-flammable: The polyethylene core provides superior fire resistance for extended periods, while the high thickness of the aluminum further enhances fire resistance. These panels are fire-resistant and fully comply with international safety standards.

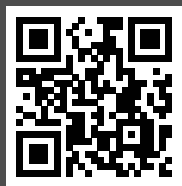

7-Design Flexibility: Upon customer request, aluminum panels can be made in different colors and sizes to match the original design vision of architects, providing an excellent decorative effect.

8-Environmental Protection: The surface coating remains unchanged and does not contribute to environmental pollution.
